

## M.A.G.I. (MAGnetic Gauss Infuser) Instructions

Congratulations on your purchase of the M.A.G.I. magnetic shielding device. Please keep this instruction sheet for future reference.

The MAGI, like any dipolar magnetic device, has two polarities, a NEGATIVE pole and a POSITIVE pole. For decades, research has shown that applying a negative magnetic flux field to the human body may result in increased healing from wounds, and more importantly, potential amelioration of chronic pain and inflammation symptoms over time when used as instructed.

**THE BASICS:** The MAGI consists of powerful rare-earth magnets that are constantly providing what is known as a “static” magnetic field. This field is then multiplied by means of a precisely cut rectangle of natural C70 (carbon-70) material called Shungite. , encased in a specialized molded shell, then placed in a neoprene, belted case. This combined magnetic, shielding wave greatly multiplies the alkaline, northern-polarity healing potential of the inherent magnetic flux field of the human body in multiple controlled testing. (Keep in mind always that magnetic fields and items such as credit cards should be kept at least 2 inches apart, damage to the card (or magnetic card motel keys) could be damaged.)

One side of the purple-colored MAGI unit will be pulsing a positive (i.e. acidic) magnetic field, while the other side is pulsing a negative (i.e. alkaline) field. **IT IS RECOMMENDED THAT THE NEGATIVE FIELD SHOULD BE POINTING TO THE SKIN WHEN APPLIED TO THE BODY!** One side of the purple case has **BODY SIDE** lettering to make this easy to determine. The magnetic/shielding field does not need to be placed directly on the skin to be effective.

The MAGI is specifically designed to be placed directly over the **SACRUM BONE**, which is located just above the pelvic floor region of the back. (In common language, the sacrum is located just above the buttocks’ “crack” on the lower backside region of the body.) There is a bundle of key nerves called the “horse’s tail” (Caudus Equinas) that cover the SACRUM bone. These nerves include the VAGAS nerve as well as 20 other vital nerves that regulate diverse functions throughout the human body. A crystalline-static electromagnetic field may greatly help to energize and balance these nerve endings that are tied to every major organ in the body. **This is the primary focus of the MAGI device.**

### HOW THE MAGI PROTECTS THE BODY FROM HARMFUL EMF FIELDS

Many studies have been conducted over the years in Russia over the past decades concerning the powerful EMF radiation protection provided by natural Carbon 70 (C70 aka Shungite natural stones.) It has been discovered that natural C70 has a nano-carbon lattice-work structure that resembles the hexagonal honeycomb of honeybees. It is this natural structure that has been shown to effectively “shield” the human body/

sacrum from potentially harmful radiation that typically exhibits a left-handed (counter-clockwise) torsion field. It does this, remarkably enough, by altering the left-handed torsion field (which is chaotic to the DNA right-handed spiral/fibonacci pulse of the DNA) and changing it into a powerful, and often HEALING right-handed (clockwise) spin. When amplified by powerful rare-earth magnetic - studies have shown that the effectiveness of the C70 is powerfully increased. NOTICE - the MAGI does not “block” the potentially harmful EMF or Microwave Field - but instead ALTERS the field - making it potentially beneficial to the cells and neurons of the body instead of harmful.

## CONTRAINDICATIONS

Our testing has shown that the MAGI’s enhanced field MAY interfere with pacemakers and other implanted medical devices. It is therefore not recommended to use the MAGI if you have such a device in your body.

Our testing has also shown that the MAGI may greatly increase the oxygen carrying capacity of the iron-based hemoglobin in human blood cells resulting higher blood O2 levels. As a result, the inherent toxicity of all prescription drugs, (as well as all-natural mineral, or herbal supplements), may be magnified and/or increased. Any questions of potential magnification of Px drugs should be directed to your attending physician or pharmacist.
